

THE FUTURE LOOKS CLEAR

when you put your eyecare
in focus with Hanita Lenses

Have you been diagnosed with cataract? It can be treated!

Cataract usually develops slowly over time, effecting one or both eyes. Aging, eye injuries or diseases such as diabetes are just some of the causes.

With healthy eyes, the lens focuses the light on the retina - creating a clear natural image.

With cataract, the eye lens becomes cloudy and less light gets through. As a result, people with cataract often experience unclear vision and decreased quality of life.

Don't let cataract
cloud your life

The most common symptoms of cataract

Blurred images

Glare

Faded colors

Double vision

Frequent prescription changes

Poor night vision

Imagine the joy
of being able
to see your
loved ones clearly
again

Your cataract can be treated!

Today, cataract surgery is **fast, simple and effective** and can even be performed as an outpatient.

The surgery involves removing the cloudy lens and replacing it with an intraocular lens (IOL).

IOLs are cutting-edge artificial lenses made from soft acrylic material implanted in the eye by your surgeon through a tiny microincision.

Once inserted in the eye, the IOL replaces your focusing power that was lost due to the cataract, restoring your vision.

Intensity provides you with:

- ✓ Intensified vision
- ✓ Far, intermediate and near visual acuity
- ✓ Ability to perform a full range of daily activities

Rediscover your sight. **Live your best life**

Hanita Lenses is a worldwide trustworthy developer, manufacturer and provider of intraocular lens solutions for cataract surgery. With more than 40 years of experience in meeting the varied needs of ophthalmic surgeons, the Hanita Lenses name is synonymous with quality, reliability and service.
