

EVERYONE
DESERVES TO SEE
THE WORLD'S
BEAUTY, CLEARLY.

SO, YOU'VE JUST BEEN DIAGNOSED WITH CATARACTS...

Don't worry, you're not alone!

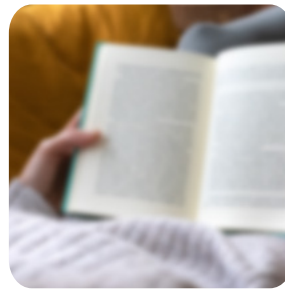

At Hanita Lenses, we understand that this can be a challenging time, but the good news is, it's also an opportunity for better vision and improved quality of life!

THE CHOICE TO TURN BACK TIME IS YOURS!

When it comes to cataract surgery, you have a wide range of choices for Intraocular Lenses (IOLs). Each option offers unique benefits. This brochure will guide you through your options, ensuring you find the perfect fit for your individual needs and lifestyle.

THE MOST COMMON SYMPTOMS OF CATARACT

Blurred images

Glare

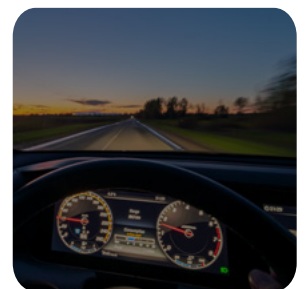

Double vision

Faded colors

Prescription changes

Poor night vision

SEE THE WORLD CLEARLY, AGAIN.

EDOF IOLS

An extended depth of focus IOL that creates a single elongated focal point to treat a variety of vision conditions.

When undergoing cataract surgery, EDOF IOLs may be the right choice for you. They offer clearer vision at more than one distance and Extended Depth of Focus (EDOF), significantly improving your overall quality of life. While you may still require glasses or contact lenses, you'll find that EDOF IOLs provide a predictable solution to restore clear vision directly in front of you, and just a little further, allowing you to see the computer, television screen, and your immediate surroundings clearly with minimal side effects.

EDOF LENS FEATURES

Innovative

Revolutionizing vision correction with advanced lens technology for an extended range of clear vision.

Effective

Exceptional visual performance and enhanced clarity in a single lens.

Efficient

Efficient and lasting results, providing clear vision with minimal maintenance.

EDOF LENSES

Extend

A posterior chamber Intraocular Lens (IOL) that provides distance vision similar to standard aspheric monofocal IOLs, while improving the intermediate vision to ease intermediate tasks. Extend Toric is indicated for the correction of regular corneal astigmatism.

Active

A diffractive pattern that allows you to be spectacle-free for both far and intermediate visual ranges.

TODAY, CATARACT SURGERY IS FAST, SIMPLE & EFFECTIVE

Here's what to expect...

1

An experienced surgeon removes the cloudy lens with cataract.

2

An intraocular lens (IOL), a cutting-edge artificial lens made from super soft acrylic material, is implanted in the eye through a tiny microincision.

3

Once inserted in the eye, the IOL replaces your focusing power lost due to the cataract, restoring your vision.
