

EVERYONE
DESERVES TO SEE
THE WORLD'S
BEAUTY, CLEARLY.

SO, YOU'VE JUST BEEN
DIAGNOSED WITH
CATARACTS...

Don't worry, you're not alone!

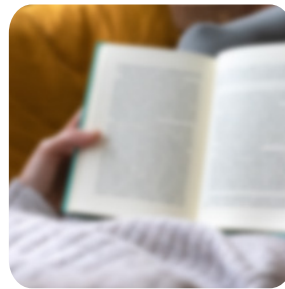

At Hanita Lenses, we understand that this can be a challenging time, but the good news is, it's also an opportunity for better vision and improved quality of life!

THE CHOICE TO TURN
BACK TIME IS YOURS!

When it comes to cataract surgery, you have a wide range of choices for Intraocular Lenses (IOLs). Each option offers unique benefits. This brochure will guide you through your options, ensuring you find the perfect fit for your individual needs and lifestyle.

THE MOST COMMON
SYMPTOMS OF CATARACT

Blurred images

Glare

Double vision

Faded colors

Prescription changes

Poor night vision

SEE THE WORLD CLEARLY, AGAIN.

MULTIFOCAL IOLs

An IOL that corrects vision at multiple distances, reducing the need for glasses or contact lenses.

When undergoing cataract surgery, Multifocal IOLs maybe the right choice for you. They offer clear vision at multiple distances, without the need for additional corrective eyewear, significantly improving your overall quality of life. Whether you're reading a book, using a computer, driving, or playing sports, Multifocal IOLs allow you the complete freedom to enjoy clear vision in every aspect of your life.

MULTIFOCAL LENS FEATURES

Multiple Focal Points

Clear vision at different distances, including up close, mid-range, and far away.

Reduced Dependence on Glasses

Replacing the natural lens of the eye with new focus and clarity, without the need for glasses.

MULTIFOCAL LENSES

Intensity

A new generation of presbyopia correcting IOL with maximum light intensity utilization for clear vision throughout the whole range of vision.

FullRange

Multifocal intraocular implant that provides excellent visual equity for near, far and functional intermediate ranges – with minimal risk of complications and the need for future touch-ups or laser corrections.

TODAY, CATARACT SURGERY IS FAST, SIMPLE & EFFECTIVE

Here's what to expect...

1

An experienced surgeon removes the cloudy lens with cataract.

2

An intraocular lens (IOL), a cutting-edge artificial lens made from super soft acrylic material, is implanted in the eye through a tiny microincision.

3

Once inserted in the eye, the IOL replaces your focusing power lost due to the cataract, restoring your vision.
